

Body camera comparison

Protec X6B 1440P 32GB Body Camera GPS + WiFi

The X6B body camera from Protec is an easy-to-use affordable alternative body camera solution. Like the HX3 the X6B is completely plug and play needing no extra software to get you up and running straight out of the box, to download video footage or images from the camera all you need is a windows or mac computer, plug the camera into a free USB port using the included charge cable and simply drag and drop the files from the camera to your computer.

As standard with all of our cameras the X6B has a built in pre and post record option, this will allow you to record the 30 seconds before and 30 seconds after you start and stop the recording, perfect for capturing footage of unexpected or volatile situations.

£ 138 plus VAT.

The WCCTV Body Worn Camera Protect is a UK-manufactured body camera specifically designed to improve safety and security for frontline workers.

The small yet durable device delivers powerful functionality, including live video transmission, two-way audio, real-time alerts and GPS via a 4G mobile connection.

Uniquely, the camera unit features a forward-facing screen that alerts a subject that they are being recorded, a proven deterrent to violent confrontations.

£550 per camera

Plus

£663 8way dock charger

£155 licence to access the cloud system

GDPR and body cameras

Overview Guidance for the Police Use of Body Worn Video Devices

- Body worn cameras may be small, but they are not to be worn or used in a hidden or covert manner.
- The use of body worn cameras should be clearly advertised, when possible, before commencing recording.
- Body worn cameras should be used with reasonable discretion (e.g., a member of the public asking general questions would not expect to be recorded - if the camera is switched on the officer should inform the person).
- With regard to the retention of footage that will not be used as evidence, it is the data controllers responsibility to devise a flexible policy that takes into account the ongoing relevance of different types of footage.
- Body worn video recordings should only be made in situations where the body worn camera wearer would previously have made a written record of the encounter.
- Recordings should commence at the start of any deployment to an incident and should continue uninterrupted until the incident has concluded.
- Recordings should not be made of general patrolling duties unless this is part of a specific operation (e.g. public order duties at football matches).
- All recordings must be securely held in accordance with force procedures. Access to recordings must be controlled and only persons having the 'operational need' to view specific incidents may view them.
- All footage recorded by the body worn camera must also be retained in accordance with personal data guidelines. Non-evidential recordings must be disposed of after a maximum on 31 days (as per ACPO guidelines).
- A record must be made of the destruction of any non-evidential recording.
- Prior to disposal, all reasonable steps must have been taken to ensure that the images are not required as evidence in any case under investigation.
